# Statistics

The Statistics screen is new functionality that can be added to any People Inc. system to provide immediate analysis of information recorded in the database. This analysis provides a monthly summary of headcount and staff turnover, the working hours available to the organisation, and any sickness and absence booked. At a glance managers can gain an overview of the resources available to the organisation and can identify any trends.

The process is a simple as this;

A monthly overview for one company will look like this:

Monthly Statistics Summary

Each tab holds specific information, all of which can easily be pulled through in basic reports, or simply exported from the screen into Excel.

Reporting and Exporting Information

A number of reports are provided alongside this screen that allows the information to be viewed and extracted in different ways. Whilst it is possible to gather and calculate this information from the standard People Inc. screens it is a much more time consuming approach and requires a thorough understanding of the report writing tool. This is not the case when the Statistics screen is used.

Customisation

It is possible to develop a customised version of the Statistics screen that analyses information from other areas of People Inc., for example:

- Days and hours spent on staff development or training
- Number of vacancies and cost of recruitment
- Summary of expense claims

Implementation

If you would like to know more, arrange a demonstration, or simply add this to your system please contact P&A Software on 01908 265111 (or via e-mail on enquiries@pasoftware.co.uk).
